

## Anti-Kidins220 Antibody (Clone p220 1F8/3)

**Alternative Names:** Kinase D Interacting Substrate 220, Ankyrin Repeat-Rich Membrane-Spanning Protein, Kinase D-Interacting Substrate 220kDa, KIAA1250, ARMS

**Catalogue Number:** AX17-10016-100ug

**Size:** 100 µg

### Background Information

Kinase D Interacting Substrate 220kDa (Kidins220) is a transmembrane protein that is preferentially expressed in brain and neuroendocrine cells. It is phosphorylated by protein Kinase (PKD) and has also been shown to function downstream of the Trk and Eph receptor tyrosine kinases.

Kidins220 controls neuronal cell survival, differentiation into axons and dendrites, and synaptic plasticity. It interacts with membrane receptors, cytosolic signaling components, and cytoskeletal proteins, serving as a scaffold that mediates crosstalk between the neurotrophin pathway and several other intracellular signaling pathways. Additionally, it has been shown to have an important role in the immune system by interacting with the B-cell and T-cell receptor.

Abnormal expression of this protein is associated with the onset of neurodegenerative diseases, including Alzheimer's disease.

### Product Information

<b>Antibody Type:</b>	Monoclonal	<b>Host:</b>	Mouse
<b>Isotype:</b>	IgG1	<b>Species Reactivity:</b>	Human, Rat
<b>Immunogen:</b>	Partial length recombinant protein from the C-terminal region of human GST-Kidins220		
<b>Format:</b>	100 µg in 100 µl PBS containing 0.02% sodium azide.		
<b>Storage Conditions:</b>	6 months: 4°C. Long-term storage: -20°C. Avoid multiple freeze and thaw cycles.		
<b>Applications:</b>	ELISA   IHC   IP   WB		

### Additional Information

<b>Subcellular location:</b>	Endosome	<b>MW:</b>	197kDa (Intended as a general guide and does not allow for all isoforms and species variations)
<b>Gene ID</b>	57498	<b>Uniprot ID:</b>	Q9ULH0
